Environmental Interest/Information System:

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
 California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
 OSHA ESTABLISHMENT
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	RP received report from a contractor who observed a leaking tank of used food oil and had placed it in a secondary containment field. At an unknown time the tank tipped over and product spilled going into a storm drain where it travelled 100 feet. This storm drain feeds to a creek which feeds Lake Elsinore. County crews are on scene, putting booms across the creek. The product within the storm drain is contained. No further release to the creek. No immediate threat to life or health. No fish kill was observed at time of report.

Environmental Interest/Information System:

US EPA Enforcement Criminal Records Management System (ECRM), now called the Criminal Case Reporting System (CCRS), is the Criminal Investigation Division's (CID) "official record" of all criminal investigation activities. The system maintains and tracks case-specific program and investigative information on over 8,200 active and archived criminal cases. CCRS is an EPA-only system and data entry is performed directly by CID employees. The Public is allowed to obtain only select defendant data fields for closed, convicted cases via the Freedom of Information Act. California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal

facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History:

Downns Energy is a high-volume commercial fueling facility. Release was discovered in April 2016 during facility UST systems upgrades/removals. Site Background The site is located southeast of the intersection of Magnolia Ave and Interstate I-15 in Corona, California. It is operated as a commercial fueling card lock facility. Two gasoline and diesel fueling areas were present at the Site. The diesel fueling area consists of 12 card lock diesel dispenser areas located in the north central portions of the site fueled by three diesel underground storage tanks (USTs) and one nearby gasoline fuel UST. The gasoline fueling area consisted of four USTs and 12 dispenser islands that were removed from the site in April to May 2016. Previous Investigations/Corrective Action An unauthorized release of diesel fuel was discovered when soil samples collected on April 6, 2016 detected TPH-diesel at a concentration of up to 10,900 mg/l. On April 19, 2016, soil samples were collected at the time of removal of four underground storage tanks (USTs) and associated dispenser islands located at the northern portion of the property. TPH-gasoline and TPH-diesel were detected at a concentration of up to 4,150 ppm and 995 ppm, respectively. Downns Energy s consultant, PIC Environmental (PIC), asserted that the diesel impacted soil detected during the removal of the USTs from the gasoline fueling area were likely residual diesel contamination that was previously assessed as part of the past releases from the USTs at the Site. Riverside County Department of Environmental Health had granted closure in 1999. From July to August 2016, 11 soil borings and three exploratory trenches were advanced to a maximum depth of 84 feet bgs. TPH-diesel was detected at a maximum concentration of 6,160 ppm at a depth of 11 feet bgs in the diesel area and was not detected in soil samples collected below 40 feet bgs. An estimated 2,000-cubic

yards of soil was believed to be affected by diesel exceeding 1,000 mg/kg. TPH-gasoline was detected at a concentration of 8,200 PPM at a depth of 20 feet in the gasoline fuel area and not detected below 45 feet bgs. No benzene was detected. Grab groundwater samples were collected from borings D1 and S2 at a depth of 60 to 80 feet bgs. No petroleum fuel constituents were detected in the groundwater. PIC concluded that the extent of the diesel-affected soil in the diesel fueling area had been defined and appeared to meet the SWRCB Low-Risk Closure Criteria, and therefore recommended no further assessment. PIC further concluded that the lateral extent of the gasoline and diesel affected soil in the gasoline fueling area was not defined with the two soil borings, and recommended that further assessment be conducted. In April 2017, four additional soil borings were advanced in the diesel dispenser area and two additional soil borings were advanced to depths up to 60 feet bgs in the gasoline fueling area. TPH-diesel was detected at a concentration of 1,524 ppm at a depth of 20 feet. No gasoline fuel constituents were detected. Groundwater was collected from three soil borings and no fuel associated constituents were detected. Trichloroethene was detected in the groundwater samples at a concentration of up to 1.5 g/l. On July 1, 2017, RCDEH transferred regulatory oversight to Santa Ana Regional Water Quality Control Board staff. Request for Closure Based on these findings, PIC Environmental is proposing site closure based on the following assertions: Diesel Fueling Area " Lateral and vertical extent of the diesel fuel hydrocarbons have been defined. " Diesel release has not impacted the underlying groundwater. " The residual concentrations of diesel in the soil meets the SWRCB Low Threat Criteria for site closure. Gasoline Fueling Area " Lateral and vertical extent of the gasoline and diesel fuel hydrocarbons detected beneath the southwestern dispenser island have adequately been defined. " The vertical extent of the affected soil does not extend to groundwater and does not impact the underlying groundwater. " There are no anticipated significant health risks associated with contact or inhalation as a result of exposure with the residual impacted soil at the Site. " The residual concentrations of gasoline and diesel fuel hydrocarbons in the soil meets the SWRCB Low Threat Criteria for site closure.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
