Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Site ID: 565432
 Site Name: Fusion Motorsports
 Violation Date: 10/24/2019
 Citation: 40 CFR 1 265.31 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.31

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten human health or the environment.

Violation Notes: Returned to compliance on 11/07/2019. Observed pooling oil on the tops of the 55 gallon used oil barrel containers. Owner/operator shall clean used oil barrels.

Violation Division: Riverside County Department of Env Health
 Violation Program: HW
 Violation Source: CERS

Site ID: 565432
 Site Name: Fusion Motorsports
 Violation Date: 1/13/2020
 Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: OBSERVATION: Observed incomplete labels on the four 55 gallon hazardous waste labels. CORRECTIVE ACTION: Owner/operator shall label hazardous waste containers with all the required information. Label shall include at least: the words ""hazardous waste"", generator name and address, accumulation start date, composition and physical state of waste, and hazardous property statement. Submit photos to this department, if applicable.

Site Name: Williams Machine Inc
Violation Date: 8/27/2013
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes: Returned to compliance on 05/20/2016.

February 10, 1999, between 4 and 6 UST s were removed from the site. (Records are not clear on exactly how many tanks were at the site) Up to 1520 ppm TPHg and 26.1 ppm MTBE were detected beneath the tanks. 294 tons of soil was removed from the UST cavity. Assessment: On June 27-28, 2001, 5 groundwater (gw) monitoring wells were installed and screened from 10 to 35 feet below grade. Concentrations up to 2200 ppm TPHg and 8 ppm MTBE were detected in the soil from 15 to 35 . On April 7 and 8, 2003, six additional gw monitoring wells were installed and screened from 10 to 30 feet below grade. Soil samples were analyzed for TPHg, VOCs and oxygenates using EPA Methods 8015M and 8260 full scan. All soil samples were non-detect for all constituents tested except one sample which had 0.13 ppm MTBE (MW-7 at 25 feet). Groundwater Monitoring: GW sampling was conducted quarterly from March 2003 to October 2008, and again in December 2009. Water levels have fluctuated from 14 to 23 feet below grade with flow directions consistently to the NNE. Up to 3400 ppb TPHg, 1.4 ppb benzene, 2.29 ppb toluene, 127 ppb ethylbenzene, 15 ppb xylenes, 8600 ppb MTBE, 1.8 ppb TAME, and 530 ppb TBA were detected initially. Well MW-5 is the only well that has had any significant TPHg and the levels have been fluctuating after initially decreasing for the first four years. MTBE and TBA decreased drastically in all wells where it was detected. During the December 2009 event, the maximum levels were 3400 ppb TPHg, 6.1 ppb xylenes, 2.1 ppb MTBE; all other constituents of EPA Methods 8015M and 8260 full scan were not detected. Remediation: A 72-hour dual-phase extraction (DPE) test was completed between April 7 and 10, 2003, using wells MW-1, MW-4 and MW-5 for 24-hours each. A total of 1293.4 gallons of gw was removed during the test. Vapor TPHg went from 290 to 660 ppmv in MW-1, from 230 to 11 ppmv in MW-4 and 9.1 to 14 ppmv in MW-5. No benzene was detected in any of the vapor samples. MTBE went from 7.7 to 8 ppmv in MW-1 and from <2.8 to 4.3 ppmv in MW-4. MTBE was not detected in MW-5. Groundwater TPHg remained consistent at 1600 ppb in MW-1 and decreased in MW-5 from 310 to 270 ppb. MTBE remained consistent at approximately 700 ppb in MW-1 and increased in well MW-4 from 2900 to 3500 ppb. An additional 10-day DPE event was conducted September 8 -17, 2004 using MW-4 and MW-7 for the first 5 days and MW-1 and MW-5 for the second 5 days. TPHg vapor concentrations were stable and below 100 ppmv during the test. BTEX or MTBE were not detected in any of the vapor samples. TPHg in the water dropped from 1500 ppb to 853 ppb in MW-5. MTBE in the groundwater dropped from 1430 to 513 ppb in MW-7. All other wells were ND at that point. 6436 gallons of groundwater and 8.55 lbs of TPHg were removed during the 10-day event. Other information: UST system currently installed and operating at the site. Site closed: 10/7/2010

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Lead Agency: RIVERSIDE COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0606565928
Global Id: T0606565928
Latitude: 33.835997823
Longitude: -117.52233608
Status: Completed - Case Closed
Status Date: 11/01/2013
Case Worker: AB
RB Case Number: Not reported
Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency
Local Case Number: 200824962
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline
Site History: A baseline (Due Diligence) assessment was conducted at the site by SECOR in November 2007 for the purposes of a potential property transfer. On November 15 and 16, 2007, SECOR personnel observed the advancement of five soil borings (B-1 through B-5) in the vicinity of the existing gasoline USTs and fuel dispensers. Borings were advanced to approximate depths of 25 feet bsg. Groundwater was encountered in borings B-1 through B-5 at an approximate depth of 20 feet bsg. Select soil and groundwater samples collected from borings B-1 through B-5 were analyzed for total petroleum hydrocarbons as gasoline range organics (TPHg); BTEX; for the fuel oxygenates MTBE, tertbutyl alcohol (TBA), di-isopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), tert-amyl methyl ether (TAME), and ethanol; for halogenated volatile organic compounds (HVOCs) by EPA Method 8260B. Select soil and groundwater samples were also analyzed for total petroleum hydrocarbons as diesel range organics (TPHd) by EPA Method 8015 modified, with a maximum TPHd concentration of 1,500 ppb in the groundwater sample from boring B-3 (20 feet bsg). TPHd was detected in three soil samples from wells MW-2 and MW-3 with a maximum concentration occurring in well MW-3 of 8.2 mg/kg at a depth of 30 feet bsg. TPPH/TPHg, BTEX VOCs, oxygenates, ethanol and the full list of EPA Method 8260B analytes were not detected in soil samples from wells MW-1, MW-2 and MW-3. TPPWTPHg, BTEX VOCs, oxygenates, ethanol and the full list of EPA Method 8260B analytes were not detected in groundwater samples from wells MW-1, MW-2 and MW-3. Cumulative Site History - CURRENT SITE USE: The site is an active service station with two 12,000 gallon gasoline underground storage tanks, two product islands, and a station building convenience store. SITE HISTORY / RELEASE INFORMATION: December 1998 - Two 10,000 gallon single-walled steel gasoline USTs and single-walled fiberglass piping were removed and replaced in the same location. Ten soil samples were collected below the piping and USTs from 3 feet to 18 feet below grade (ft bg). During tank excavation groundwater (GW) was observed in the tank cavity at an approximate depth of 17 ft bg. Soil samples were analyzed for gasoline using EPA Method 8015, and BTEX and MTBE using EPA Method 8020A. Sample T-2-4-2 contained detectable concentrations of TPHg at 810 ppm, 6.4 ppm Ethylbenzene, 9.1 ppm Xylene. Soil sample T-1-3-2 contained 0.033 ppm of MTBE (6.2 ppm MTBE confirmed by EPA Method 8260). The remaining soil samples were non-detect (ND) for all

constituents analyzed. January 2005 According to the Request for Site Closure dated January 31, 2013, the dispenser and product piping was upgraded. 137 cubic yards of soil was excavated. Soil samples (DS-1, DS-2) were collected at four feet beneath each dispenser. Soil samples (P-1, P-2) were collected at four feet and five feet respectively, beneath the piping. All soil sample results were ND for TPHg, BTEX, MTBE, TBA, DIPE, ETBE, TAME and ethanol. The dispenser islands were moved during this upgrade or the 1998 UST replacements. ASSESSMENT November 2007- A baseline (Due Diligence) assessment was conducted for potential property transfer. Five borings (B-1 through B-5) were advanced near the existing USTs and fuel dispensers to approximate depths of 25 ft bg. Select soil and GW samples were analyzed for TPH (gasoline and diesel range) using EPA Method 8015 and for full scan VOCs using EPA Method 8260. Only one soil sample was tested from each boring (B-1, B-3, B-4, B-5 at 20 ft bg and B-2 at 25 ft bg). All soil samples were ND for all constituents tested except TPHd at a maximum concentration of 4.4J ppm (B-3-S-20). GW was encountered in borings B-1 through B-5 at an approximate depth of 20 ft bg and GW grab samples were collected from each borehole. GW sample results showed maximum concentrations in B-3 (54 ppb TPHg, 1500 ppb TPHd, 0.54 ppb benzene, 3.0 ppb toluene, 0.69 ppb ethylbenzene, 3.1 ppb xylenes, 0.18 ppb chloroform, 0.13 ppb n-propylbenzene, 0.49 ppb 1,2,4-TMB, 0.32 ppb 1,3,5-TMB, and ND for all other constituents analyzed). Site was entered into LOP in 2008. February 2009 - Three GW monitoring wells (MW-1, MW-2, and MW-3) were installed south, west and east of the former UST excavation area. GW levels in the wells were between approximately 17 and 18 ft bg. The wells were screened from 10 to 30 ft bg (MW-1 and MW-3) and 15 to 30 ft bg (MW-2). Soil samples were collected every five feet to the bottom of the boring and analyzed for TPHg, TPHd, and full scan VOC s using EPA Method 8260. TPHd was detected in three soil samples from wells MW-2 and MW-3 with a maximum concentration of 8.2 mg/kg (MW-3 @ 30 ft). All other soil samples were ND for all constituents analyzed. VERIFICATION December 2010 One Geoprobe boring (GP-1) was advanced south of the former UST excavation area to a depth of approximately 30 ft bg. GW was encountered at approximately 20 ft bg. Soil samples were collected at five foot intervals, beginning at 10 ft bg. A grab GW sample was collected from two feet below the GW surface. Soil and GW samples were analyzed for TPH (C6-C44) using EPA Method 8015B and full scan VOCs using EPA 8260B. All soil samples were ND for all constituents analyzed. All grab GW samples were ND for all constituents analyzed except for 84 ppb TPH (C6-C44) however, the laboratory analytical report case narrative stated that the sample chromatography is not typical of either Gasoline or Diesel fuels. GROUNDWATER MONITORING: GW monitoring has been conducted from March 2009 to August 2012 in MW-1, MW-2 and MW-3. GW samples from all three wells have been ND for all constituents of concern with the exception of TPH-d observed in MW-2 at 66 ppb in June 2011 and 260HD ppb in August 2012. J value VOCs were detected in the GW grab sample from B-3 and have since been ND in all sampling events from all of the monitoring wells. REMEDIATION: All initial concentrations remain in-situ. No remediation has taken place. Wells destroyed on 10/2/2013 Case closure letter issued by RCDEH 11/1/2013

CERS Description: Industrial Facility Storm Water

Violations:

Site ID: 536551
Site Name: Mayhew Aggregates and Mine Rec
Violation Date: 2/8/2017
Citation: 2014-0057-DWQ - Industrial General Permit
Violation Description: Unauthorized Discharge
Violation Notes: Unauthorized sediment-laden non-storm water discharge to storm drainage system.
Violation Division: Water Boards
Violation Program: INDSTW
Violation Source: SMARTS

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-08-2017
Violations Found: Yes
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: In response to a complaint Regional Board staff visited the site to evaluate BMP implementation at the site. During the visit, Board staff observed the sediment-laden non-storm water discharge. Staff observed that water tanker to use to wash sediment on street without any BMP implementation to control pollutants on site. Regional Board staff

Site History: Updated Sept 2015 by W Rice Mayhew Aggregates Landfill is an Inert Debris Engineered Fill Operation (IDEFO) located in Corona on Maitri Road. As an inert landfill, it accepts only uncontaminated earthen materials, uncontaminated concrete, brick, ceramics, crushed glass, and fully cured asphalt for disposal. Disposal of wastes containing lumber, organic materials, municipal solid waste, gypsum or dry wall, or hazardous materials is not permitted at the facility. Loads are visually checked at the scales using a video system with a camera mounted over the scale area. In addition, loads are visually checked by Mayhew staff in the dumping area. There are two large pits at the Mayhew Aggregates site. Both pits have been excavated as part of sand and gravel mining operations. Mining in the North Pit has ceased and is the location for current (2015) disposal operations. Mining operations are still performed in the South Pit, though will likely be discontinued in the near future. The North Pit encompasses approximately 30 acres, is approximately 50 - 60 feet deep, and has a disposal capacity of approximately 5,000,000 tons. Facility staff estimate that it will take approximately 8 - 10 years to fill the North Pit depending upon economic and market circumstances. In 2016, Mayhew Aggregates plans to begin re-excavating and re-compacting the materials in the North Pit to properly prepare the sub-grade for future re-development at the site (i.e., residential, commercial, or light industrial). This process will be overseen by a certified engineer or geologist. The much larger South Pit encompasses approximately 200 acres, is approximately 200 feet deep, and will have a disposal capacity of approximately 50,000,000 tons. Mayhew staff estimate that it will take approximately 50 years to fill the South Pit. Disposal activities in the South Pit will not commence

until work in the North Pit is completed. As of 2015, Mayhew receives an average of 500 loads per month, which is approximately 12,000 tons of inert debris per month. A SWPPP has been prepared for the site and the WDID Number for the facility is 8-331023698.

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 07-16-2009
Violations Found: No
Eval Type: Construction Storm Water Compliance Evaluation
Eval Notes: B Type compliance (no sampling) inspection The site has many sources of sediment. There is one obvious location where run-off is discharged where there is a 8" diameter plastic standpipe for over flow. The operations manager Dan Hicks didn't know what the GIP was, anything about a SWPPP or sampling. One of the owners Hamid Soroosh was there too and he didn't know about the SWPPP and there was no SWPPP on site. The standpipe overflows into a pipe that goes under a small levee and the discharge point is on the stream side of the levee, but was obscured by vegetation. Sent permittee email regarding the violations asking to obtain compliance.

Eval General Type: Case Development Inspection
Eval Date: 11-10-2009
Violations Found: No
Eval Type: Industrial Storm Water Enforcement Follow-up
Eval Notes:

Enforcement Follow-up inspection: 2nd NNC letter was sent, and received by site, but the 2008-2009 annual report was not received as of today. Staff checking on site's status. Staff arrived at 1112 hours: On arrival, staff noted that the site is still in business. Staff discussed the situation with Mr. Dan Hicks. He was uncertain of the annual report requirement, since this is his first year taking over the paperwork. His old secretary was the one to perform the administrative work, but after downsizing, the task was passed on to him, without a clue on how to approach this. His partner, Barney Northcote, received the letters, but did not forward the letters to him for response. Staff showed Mr. Hicks the proper website for form download, and to apply for an online annual report data submission. Mr. Northcote stated that he will submit the annual report before the month ends as he will gather the data from his partner. The site is an open pit quarry. Await for the annual report.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020	Source: EPA
Date Data Arrived at EDR: 08/03/2020	Telephone: N/A
Date Made Active in Reports: 08/25/2020	Last EDR Contact: 11/05/2020
Number of Days to Update: 22	Next Scheduled EDR Contact: 01/11/2021
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 74	Next Scheduled EDR Contact: 01/04/2021
	Data Release Frequency: Quarterly

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 08/10/2020
Date Data Arrived at EDR: 10/20/2020
Date Made Active in Reports: 11/02/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Certified Sanborn® Map Report

11/16/20

Site Name:

I-15 Express Lanes Project Sol
I-15 Express Lanes Project Sol
Corona, CA 92883
EDR Inquiry # 6264849.1

Client Name:

HDR Engineering, Inc.
350 S. Grand Avenue
Los Angeles, CA 90017
Contact: Uyenlan Vu

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by HDR Engineering, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 975E-481D-B74A

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

HDR Engineering, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. Interstate 15 Express Lanes Project Southern Extension (ELPSE)

RIVERSIDE COUNTY, CALIFORNIA
DISTRICT 8 – RIV-15 PM 20.3 TO PM 38.8
EA: RIV 08-0J0820 / ID: 08-18000063

Aerially Deposited Lead Analysis

Prepared for the
State of California Department of Transportation
in coordination with the Riverside County Transportation Commission

January 2020

Traffic capacity and operational improvements would be constructed on Interstate 15 (I-15) between post miles (PM) 22.3 near SR-74 (Central Avenue) in Lake Elsinore to PM 36.8 near Cajalco Road in Corona. This area is referred to as the lane improvement limits. The lane improvements are located within Riverside County, California and run through the cities of Lake Elsinore, Corona, and portions of unincorporated Riverside County including the Temescal Valley. The limits for the express lanes advance signage extend from PM 20.3 to PM 38.8 in Riverside County; these post miles constitute the overall project limits.

Aerially Deposited Lead Analysis

Submitted Pursuant to: (State) Division 13, California Public Resources Code
(Federal) 42 USC 4332(2)(C) and 49 U.S.C. 303

THE STATE OF CALIFORNIA
Department of Transportation
in cooperation with
THE RIVERSIDE COUNTY TRANSPORTATION COMMISSION

Date of Approval

Executive Summary

Leighton Consulting, Inc. (Leighton Consulting) performed an Aerially Deposited Lead (ADL) Survey for the Interstate 15 (I-15) Express Lanes Project Southern Extension (ELPSE) within the Cities of Corona, Lake Elsinore, and portions of unincorporated Riverside County, in Riverside County, California (Figure 1). The work has been conducted to assess areas of potential lead impacted soil within the California Department of Transportation (Caltrans) right-of-way.

The subject alignment currently consists of approximately 18.5 miles of the I-15 right-of-way from postmile (PM) 20.3 South of State Route 74 (Central Avenue) in the City of Lake Elsinore to PM 38.8 near East Ontario Avenue in the City of Corona (Figures 1 and 2). I-15 is predominately a six-lane divided urban freeway with three 12-foot wide lanes in each direction, with the exception of the segment between Railroad Canyon Road and Temescal Canyon Road for approximately 13 miles where a fourth lane exists in each direction that presently functions as the outside shoulder. The Riverside County Transportation Commission (RCTC), in cooperation with Caltrans is proposing to add two express lanes in each direction on I-15 from PM 22.3 north of State Route 74 in the City of Lake Elsinore, to PM 36.8, in the vicinity of the Cajalco Road interchange in the City of Corona. Additionally, two miles of advanced signage and striping transition will be constructed between PM 20.3 and 22.3 at the south end of the alignment and between PM 36.8 and 38.8 at the north end of the alignment.

The alignment is and has been historically part of I-15 and earlier highways and the potential for historical soil impacts from aerially deposited lead (ADL) exists. ADL in soil may result from emissions from vehicles using leaded gasoline. The shallow soil in unpaved areas near highways may contain lead in concentrations above thresholds deemed hazardous under California regulations. If hazardous soil is to be excavated or disturbed by construction activities, regulations require the soil to be disposed of at an appropriate facility or placed under roadways as described in the Department of Toxic Substances Control (DTSC) soil reuse agreement. Soils are also to be assessed for adequate worker protection during construction (DTSC, 2016).

Leighton Consulting submitted an ADL Analysis Workplan for the Interstate 15 Express Lanes Project Southern Extension (Leighton, 2019) detailing the use of the data collected along the ELPSE alignment during the I-15 Corridor Improvement Project performed in 2009 and 2010. The I-15 ELPSE ADL analysis workplan was approved by Caltrans on October 3, 2019 (Appendix D).

Between June 10 and August 5, 2009, and March 9 and March 17, 2010, Leighton Consulting advanced a total of 725 borings at approximately 600-foot intervals on the median, shoulders, and ramps of the 18.5-mile study area of the I-15 Freeway to investigate the presence of ADL (Figure 2, Sheets 1 through 41) and collected 2,994 soil samples. On- and off-ramp boring locations were placed at shorter intervals to generate sufficient data to be suitable for statistical analysis as

described in the Caltrans Aerially Deposited Lead Guidance (Caltrans, 2007). The boring location identifier “A” refers to borings advanced in the northbound median, the identifier “B” refers to borings advanced in the southbound median, the identifier “C” refers to borings advanced in the northbound shoulder and ramps, and the identifier “D” refers to borings advanced in the southbound shoulder and ramps. Discrete soil samples were collected from each soil boring at depths of approximately 0.5, 1.0, 2.5, and 5.0 feet below ground surface (bgs) or practical refusal using a direct-push drill rig or hand auger.

Soil samples were collected during two different field investigations (a median ADL survey and a shoulders and ramps ADL survey). Following the median ADL investigation (Leighton, 2009), the DTSC issued a new ADL variance resulting in a slight change in the protocols for analyzing soils for soluble lead. As a result, a slightly larger percentage of samples collected during the shoulders and ramps ADL investigation (Leighton 2010) were analyzed for soluble lead than were during the median ADL survey (Leighton, 2009).

Soil samples collected for the median ADL survey were analyzed for total threshold limit concentration (TTLC) of lead by United States Environmental Protection Agency (EPA) Method 6010B. Samples with TTLC lead concentrations above 50 milligrams per kilogram (mg/kg), but less than 1,000 mg/kg, were analyzed for soluble threshold limit concentration (STLC) by the California citric acid waste extraction test (WET-CA). Samples that contained soluble lead concentrations greater than 5 milligrams per liter (mg/l) were also analyzed for STLC by California deionized water waste extraction test (WET-DI). Soil samples with TTLC lead $\geq 1,000$ mg/kg and/or STLC ≥ 5 mg/l by the WET-CA method were analyzed by the toxicity characteristic leaching procedure (TCLP) EPA Method 1311. Based on the results of this analysis, an additional 10% of soil samples were randomly selected to be analyzed for STLC by the WET-CA and WET-DI methods for the purposes of statistical analysis. Ten percent of the soil samples were also analyzed for soil pH by EPA Method 9045.

Soil samples collected for the shoulders and ramps ADL survey were analyzed for TTLC lead by EPA Method 6010B. Samples with TTLC lead concentrations above 50 mg/kg, but less than 1,000 mg/kg, were analyzed for lead STLC by the WET-CA and WET-DI methods. Samples with TTLC lead concentrations above 50 mg/kg, but less than 3,397 mg/kg, were analyzed for STLC by the WET-DI method. An additional 10% of random soil samples were also analyzed for STLC by the WET-CA and WET-DI methods. Soil samples with TTLC lead $\geq 1,000$ mg/kg and/or an STLC ≥ 5 mg/l by the WET-DI method were analyzed for TCLP by EPA Method 1311. Ten percent of the soil samples were also analyzed for soil pH by EPA Method 9045.

The soil samples exhibited total lead concentrations ranging from 0.205 mg/kg to 781 mg/kg, all of which are below the California Code of Regulation (CCR), Title 22 waste disposal criteria of 1,000 mg/kg TTLC lead. Sixty-Nine (69) soil samples exceeded 50 mg/kg total lead and therefore were selected to be analyzed for STLC analysis by the WET-CA and WET-DI methods. STLCs as

measured using the WET-CA method ranged from 0.050 mg/l to 9.41 mg/l. Nine (9) samples contained lead STLCs ≥ 5 mg/l. These samples were also analyzed for soluble lead using the TCLP method to evaluate if they contained hazardous concentrations of soluble lead, none of the samples analyzed by the TCLP method contained >5 mg/l of soluble lead and thus were not considered hazardous waste.

Statistical analysis identified the 95% upper confidence limit (UCL) for the population mean for total lead was 12.54 mg/kg. The 95% UCL for soluble lead (STLC by the WET-CA method) was 0.99 mg/l; therefore, tested soil does not represent significant environmental or health hazards and can be classified as non-hazardous. The average TTLC lead concentrations are below the DTSC modified Screening Level of 80 mg/kg for unrestricted land use (DTSC, 2019).

Based on the ADL Survey data and statistical analysis, tested soil does not represent significant environmental or health hazards and, according to the soil reuse agreement between the DTSC and Caltrans, the soil can be classified as unregulated Type X soil and can be reused on site without restriction. Per the soil reuse agreement, a Lead Compliance Plan is required for worker safety.

1 Proposed Project

1.1 Introduction

The Riverside County Transportation Commission (RCTC) and Caltrans District 8 propose to develop an express lane network to meet existing and future travel demand, enhance mobility, and afford greater user flexibility on I-15 in Riverside County. The project limits are from PM 20.3 to PM 38.8, for a total of 18.5 miles, which encompasses all project improvements including signage. Construction of express lanes would begin at PM 22.3 and end at PM 36.8 for a distance of 14.5 miles.

The lane improvements within Riverside County would run through the cities of Lake Elsinore and Corona, as well as portions of unincorporated Riverside County (Figure 1, Project Vicinity). All proposed improvements would be constructed within the existing Caltrans right-of-way, with the majority of the improvements occurring within the existing I-15 median.

The alignment is and has been historically part of I-15 and earlier highways and the potential for historical soil impacts from ADL exists. ADL in soil results from emissions from vehicles using leaded gasoline. The shallow soil in unpaved areas near highways often contains lead in concentrations above thresholds deemed hazardous under California regulations. If hazardous soil is to be excavated or disturbed by construction activities, regulations require the soil to be disposed of at an appropriate facility or placed under roadways using the soil reuse agreement between the DTSC and Caltrans and assessed for adequate worker protection during construction (DTSC, 2016).

References are provided in Chapter 9.

1.2 Project Alternatives

RCTC, in cooperation with Caltrans, District 8, proposes capacity and operational improvements on I-15 from State Route 74 (Central Avenue) in the City of Lake Elsinore to Cajalco Road in the City of Corona (in Riverside County). The Interstate 15 ELPSE stretches approximately 14.5 miles in length, traversing through the cities of Lake Elsinore, Corona, and portions of unincorporated Riverside County, which include the Temescal Valley. These improvements are intended to address existing and projected deficiencies in capacity and operations within the project limits. As proposed, the project would extend the express lanes on I-15 from SR-74 to Cajalco Road. These improvements would enhance regional mobility and offer greater user flexibility of the regional transportation system. The proposed project consists of one Build Alternative and a No-Build Alternative.

1.2.1 No-Build Alternative

Under the No-Build Alternative, the I-15 ELPSE would not be constructed. This alternative does not meet the project purpose and need; however, it would not preclude the construction of future improvements or general maintenance activities. Describing and analyzing a No-Build Alternative helps both decision makers and the public to compare the impacts of approving the proposed project with the consequences of not approving the proposed project.

1.2.2 Build Alternative

The Build Alternative includes construction of two express lanes in each direction on I-15 in Riverside County between PM 22.3 and PM 36.8. The Build Alternative would be constructed within the existing right of way. Sign modifications and the installation of new signs would also be included to support the new express lanes. Advanced signage is required to be posted a minimum of two miles prior to the start of the express lanes. The project limits for the signage extend from PM 20.3 to PM 38.8 in Riverside County.

The Build Alternative would provide:

- ◆ Two express lanes in each direction from SR-74 (Central Avenue) to Cajalco Road (Corona), a distance of 14.9 miles, by paving the existing unpaved median, joining the existing I-15 express lanes. Isolated outside widening and shoulder replacement may occur in both travel directions to provide the express lane ingress/egress.
- ◆ Provide the express lane ingress/egress at multiple locations along the corridor.

The Build Alternative would not add any new connections and will not improve any existing ramps.

Figure 1
Project Vicinity
Interstate 15 Express Lanes Project Southern Extension

This page is intentionally blank.

1.2.3 Additional Project Features

In addition to the features described above, the Build Alternative includes additional project components, such as retaining walls, noise barriers, stormwater runoff treatment system devices, and bridge widening, in order to accommodate the southern extension of the express lanes. The Build Alternative is planned to be constructed within the existing Caltrans right-of-way.

Proposed Bridge Improvements

Existing Bridge Name	Proposed Improvement
Gavilan Wash	Closing the middle between existing NB & SB decks
Lake Street Undercrossing	Closing the middle between existing NB & SB decks
Temescal Canyon Road Overhead	Closing the middle between existing NB & SB decks
Temescal Wash	Closing the middle between existing NB & SB decks
Horsethief Canyon Road Undercrossing	Closing the middle between existing NB & SB decks
Horsethief Canyon Wash	Closing the middle between existing NB & SB decks
Indian Wash	Closing the middle between existing NB & SB decks
Indian Truck Trail Undercrossing	Closing the middle between existing NB & SB decks
Temescal Canyon Road Undercrossing	Closing the middle between existing NB & SB decks
Mayhew Wash	Closing the middle between existing NB & SB decks
Coldwater Wash	Closing the middle between existing NB & SB decks
Temescal Canyon Road Undercrossing	Closing the middle between existing NB & SB decks
Brown Canyon Wash	Closing the middle (outside widening may be required)
Weirick Road Undercrossing	Closing the middle (outside widening may be required)
Bedford Wash	Closing the middle (outside widening may be required)

2 Sampling Strategy and Rationale

ADL is the result of tetraethyl lead, which was added to gasoline for many years to prevent gasoline engine knocking. Lead was present in the vehicle exhaust emissions, was aerially deposited, and has been found in the soils adjacent to major thoroughfares. Caltrans has entered into a soil management agreement with the DTSC for the management of ADL impacted soils within Caltrans rights-of-way (DTSC, 2016). The ADL Survey was performed in accordance with the Caltrans-approved workplans (Leighton Consulting, 2009a; 2009b; 2019) and consisted of the following tasks:

- An assessment of possible ADL in exposed soils within the median, shoulders, and ramps of I-15 by collecting discrete surface and subsurface soil samples for analysis of lead.
- Analysis of total lead and leachable lead concentrations in soil samples.
- A statistical analysis of the analytical results and a comparison of these results to disposal and reuse options.

3 Prefield Activities

3.1 Health and Safety Plan

In accordance with standard environmental procedures, Leighton Consulting prepared a Health and Safety Plan (HSP) describing safety aspects of the work to be performed at the site. The HSP was prepared in compliance with the Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1910.120 and reviewed by a certified industrial hygienist in accordance with Caltrans Guidelines (Caltrans, 2007c). The HSP contains information on chemical and physical hazards, emergency response plans, and information on routes to hospitals and emergency contacts. The site-specific HSP was on site during field activities. The HSP was reviewed and signed by each of the site personnel.

3.2 Utilities

Leighton Consulting contacted Underground Service Alert (USA) a minimum of 48 hours prior to the commencement of subsurface field activities as required by law. Leighton Consulting's field personnel met with representatives of the utility services in the field to locate existing utility lines. Utility maps provided by HDR Engineering, Inc. were loaded into Global Positioning System (GPS) software and utilized by field personnel during the investigation to evaluate potential utility conflicts. No utilities were encountered during field operations.

3.3 Encroachment Permit

Leighton Consulting had two encroachment permits for the fieldwork conducted within the Caltrans right-of-way. The first permit number was 08-08-N-SV-0589 and was dated June 4, 2009, and expired June 25, 2010. The second permit number was 08-08-N-DP-0731 and was dated June 4, 2009, and expired on June 25, 2010. Leighton Consulting notified the inspector 10 days prior to field sampling activities per the permit requirements. In addition, the Caltrans Environmental Reviewer was notified at least 72 hours in advance of execution of field sampling.

3.4 Traffic Control

A Cone Zone, an experienced traffic control subcontractor, was contracted by Leighton Consulting and was on site during the sampling activities and implemented appropriate traffic control (shoulder and median closure) in accordance with the encroachment permit and Caltrans Guidelines.

4 Field Investigation

4.1 ADL Survey

Between June 10 and August 5, 2009, and March 9 and March 17, 2010, Leighton Consulting advanced a total of 725 borings at approximately 600-foot intervals on the median, shoulders, and ramps of the 18.5-mile study area of the I-15 to investigate the presence of ADL (Figure 2, Sheets 1 through 41). Ramp boring locations were placed at shorter intervals to generate sufficient data to be suitable for statistical analysis (Caltrans, 2007a). The boring location identifier “A” refers to borings advanced in the northbound median, the identifier “B” refers to borings advanced in the southbound median, the identifier “C” refers to borings advanced in the northbound shoulder and ramps, and the identifier “D” refers to borings advanced in the southbound shoulder and ramps. Discrete soil samples were collected from each soil boring at depths of approximately 0.5, 1.0, 2.5, and 5.0 feet bgs or practical refusal using a direct push drill rig or hand auger.

4.2 Sample Collection

Level D personal protective equipment (PPE) was worn during field activities. This equipment included work clothes, steel-toed boots, hard hats, and traffic vests. A new pair of latex or nitrile gloves was worn when collecting each sample. The soils were described and classified using the Unified Soil Classification System (USCS) and description of visible evidence of soil contamination (e.g., odor, staining) was recorded on a soil sampling log by the field geologist during sampling activities. Soil sample logs are provided in Appendix A. Boreholes were backfilled with bentonite chips and hydrated with potable water.

The location of each borehole was measured by GPS equipment. Horizontal coordinates were calculated within an accuracy of approximately 3 feet and reported in decimal degree units in accordance with the North American Datum of 1983 (NAD 83). Boring locations are depicted on Figure 2, Sheets 1 through 41.

4.3 Equipment Decontamination

Non-dedicated sampling equipment (i.e., hand auger, direct push sampler) was decontaminated before and after each sample was collected using the following procedures:

- Detergent wash scrub in first 5-gallon bucket
- Potable water rinse in second 5-gallon bucket
- Distilled water rinse in third 5-gallon bucket
- Final distilled water rinse pumped or poured directly from distilled water container into the third 5-gallon bucket

The equipment decontamination station, consisting of three 5-gallon buckets, was located on the opposite side of the direct push drill rig away from the sample preparation area. Sampling equipment was placed on clean Visqueen to dry. Each 5-gallon bucket was contained on top of plastic sheeting.

4.4 Sampling Containers, Preservation, and Holding Times

The direct push soil samples were collected in new acetate sleeves, which were cut at the appropriate sampling depth in the field with a decontaminated hacksaw, sealed with Teflon sheets and tight-fitting plastic end caps, and labeled with sample point identification. When samples were collected via hand auger they were transferred into laboratory-supplied, clean 4-oz glass jars. Each sample was placed in an ice chest cooled to approximately 4 degrees Celsius for storage and transportation to Enviro-Chem, Inc. in Pomona, California, a State of California-certified laboratory.

4.5 Sample Handling and Storage

In the field, each sample container was marked prior to sample collection with the sampling location number; depth; date and time of sample collection; sampler's name; type of analysis; and preservative used. Each sample container was wiped with clean paper towels, sealed in Ziploc bags, and securely packed in a cooler on ice in preparation for delivery to the laboratory.

4.6 Sample Custody

For each sample submitted to the laboratory for analysis, information was provided on the chain-of-custody form supplied by the laboratory. The information recorded included the sampling date and time, sample identification number, matrix type, requested analyses and methods, preservatives, and the sampler's name. Sampling team members maintained custody of the samples until they were relinquished to laboratory personnel. The chain-of-custody form accompanied the samples from the time of collection until received by the laboratory. Each party taking possession of the samples signed the chain-of-custody form signifying receipt. A copy of the original completed forms was provided by the laboratory along with the report of results. Copies of the chain-of-custody forms have been provided with the laboratory reports in Appendix B.

5 Laboratory Analysis

5.1 Analytical Laboratory Certification

Analytical procedures applicable to samples obtained from the site are presented below. The reporting limits (practical quantitation limit) for each analyte tested are provided in the laboratory reports provided in Appendix B. The laboratory, Enviro-Chem, Inc. of Pomona, California, is certified by the Department of Public Health, Environmental Laboratory Accreditation Program (ELAP), certificate number 1555, for each analytical method performed.

5.2 ADL Analytical Protocols

Soil samples were collected during two different field mobilizations (a median ADL survey and a shoulders and ramps ADL survey). After the initial mobilization, the DTSC issued a new ADL variance; therefore soil sample analytical methodologies were changed slightly between these two investigations.

Soil samples collected for the median ADL survey were analyzed for total threshold limit concentration (TTLC) of lead by United States Environmental Protection Agency (EPA) Method 6010B. Samples with TTLC lead concentrations above 50 milligrams per kilogram (mg/kg), but less than 1,000 mg/kg, were analyzed for soluble threshold limit concentration (STLC) by the California citric acid waste extraction test (WET-CA). Samples that contained lead STLC by the WET-CA method ≥ 5 milligrams per liter (mg/l) were also analyzed for STLC by the deionized water WET method (WET-DI). Soil samples with lead TTLC $\geq 1,000$ mg/kg and/or a lead STLC ≥ 5 mg/l as measured by the WET-CA method were analyzed by the toxicity characteristic leaching procedure (TCLP) EPA Method 1311. Based on the results of this analysis, an additional 10% of random soil samples were selected to be analyzed for lead STLC by the WET-CA and WET-DI methods. Ten percent of the soil samples were also analyzed for soil pH by EPA Method 9045.

Soil samples collected for the shoulders and ramps ADL survey were analyzed for lead TTLC by EPA Method 6010B. Samples with lead TTLC greater than 50 mg/kg, but less than 1,000 mg/kg, were analyzed for lead STLC by the WET-CA and WET-DI methods. Samples with lead TTLC concentrations greater than 50 mg/kg, but less than 3,397 mg/kg, were analyzed for lead STLC by the WET-DI method. An additional 10% of random soil samples were also analyzed for lead STLC by the WET-CA and WET-DI methods. Soil samples with lead TTLC lead $\geq 1,000$ mg/kg and/or lead STLC as measured by the WET-CA method ≥ 5 mg/l were analyzed by the TCLP (EPA Method 1311).

Under the current soil management agreement standard, soils containing lead TTLC greater than 50 mg/kg are to be analyzed for lead STLC by the WET-CA method. Samples that exhibit a concentration ≥ 5 mg/L using the WET-CA method will be analyzed for lead STLC by the WET-

DI method. Both protocols were followed during under the two previous ADL variances. Soil samples with total lead >1,000 mg/kg will also be analyzed by the TCLP (EPA Method 1311). No samples collected within the ELPSE alignment contained >1,000 mg/kg total lead and therefore did not require TCLP analyses beyond those performed during the previous investigations under the current soil management agreement. The STLC analyses that were performed during the previous investigations were adequate for the dataset based on the requirements of the current soil management agreement.

6 Quality Assurance Project Plan (QAPP)

Leighton Consulting recognizes that data quality comes from several different procedures, including field procedures, documentation procedures, and quality assurance/quality control (QA/QC) procedures. The necessary QA/QC procedures were performed in accordance with acceptable protocols. The data generated was evaluated to verify that it meets the overall project data quality objectives (DQOs) for precision, accuracy, representativeness, comparability, and completeness (PARCC). Sampling and analysis procedures, personnel requirements, chain-of-custody and documentation requirements, and specific criteria for evaluating data acceptability can be traceable.

Leighton Consulting collected two types of QC samples: field duplicate samples and field equipment blank samples.

6.1 Field Duplicate Samples

A minimum of 10% of primary samples were collected as field duplicates. Sets of samples (primary and duplicate) from a single source were prepared, labeled with unique sample numbers, and submitted to the laboratory without cross-referencing data and without identification as duplicates on the parameter request sheet. Field duplicates were designated by adding 500 to the sample numbers in the median and 1,000 to the sample numbers in the shoulders/ramps to the primary sample location numbers (e.g., A690-0.5, D1198-0.5).

6.2 Field Equipment Blanks

Field equipment blanks were prepared in the field to evaluate whether a sampling device (e.g., direct push sampler, hand auger) had been effectively cleaned. The sampling device was decontaminated in accordance with the procedures described in Section 4.3. Metal-free, deionized water was then poured through the device, transferred to the appropriate sample bottles, preserved, and returned to the laboratory for analysis. One equipment blank was collected per sampling tool used at the site each day. The equipment blank was analyzed for constituents of concern. Equipment blanks were designated with E-series numbers and results are summarized on Table 2. Lead was not reported above the practical quantitation limits (PQLs) in any of the equipment blanks analyzed.

6.3 Laboratory QC Requirements

To obtain data on the precision, accuracy, and representativeness of the analytical results, the analytical laboratory analyzed the QC samples with suspected contamination as specified by the Project Manager. The control limits and corrective actions for each parameter are specified in each analytical method. Laboratory analyses of soil and water required the following QC samples:

- Calibration verification following instrument calibration and once every 10th sample thereafter through the working day.
- Laboratory blank verification at instrument calibration and once every 10th sample thereafter through the working day to check instrument drift.
- Method blank analysis at a rate of once per batch of samples or one per 20 samples of a single matrix, whichever is more frequent, to evaluate contamination levels during preparation.
- Matrix spike/matrix spike duplicate (MS/MSD) analyses at a rate of one per batch of samples for each matrix type (e.g., soil, water) and concentration level (e.g., low, medium) or one in 20 samples, whichever is more frequent. The MS/MSDs are used to check for the ability to accurately and precisely recover compounds of interest from the matrix.

The results of analyses of these QC samples were used as independent, external checks on laboratory and field contamination.

6.4 Laboratory QA/QC

A QA/QC evaluation according to precision, accuracy, representativeness, completeness, and comparability (PARCC) parameters was performed relative to the project data quality objectives (DQOs). The results of the laboratory data validation for PARCC parameters were reported to be within the acceptable goals of the EPA guidelines. Of the 725 soil samples collected within the ELPSE alignment, none of the sample results were rejected. The completeness was reported at 100% and met the DQO goal of 90%.

Environmental and laboratory QA/QC samples assess the effects of sampling procedures and evaluate laboratory contamination, laboratory performance, and matrix effects. QA/QC samples include: equipment rinsate blanks, field duplicates, method blanks, laboratory control samples (LCSs), surrogate spikes, matrix spike/matrix spike duplicates (MS/MSDs), and laboratory duplicates.

6.4.1 Precision

Precision is a measure of the agreement or reproducibility of analytical results under a given set of conditions. It is a quantity that cannot be measured directly but is calculated from percent recovery data. Precision is expressed as the relative percent difference (RPD):

$$RPD = (D1-D2) / \{1/2(D1+D2)\} \times 100$$

Where D1 and D2 are the reported concentrations for sample and duplicate analyses.

Precision is primarily assessed by calculating an RPD from the percent recoveries of the spiked compounds for each sample in the MS/MSD pair. In the absence of an MS/MSD pair, a laboratory duplicate or laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) pair can be analyzed as an alternative means of assessing precision. In some cases, samples from multiple sample delivery groups (SDGs) were within one QC batch and therefore are associated with the same laboratory QC samples. An additional measure of sampling precision was obtained by collecting and analyzing field duplicate samples, which were compared using the RPD result as the evaluation criteria (Table 2).

For inorganic analysis, one primary sample is analyzed and accompanied by an unspiked laboratory duplicate. The data reviewer compares the reported results of the primary analysis and the laboratory duplicate and then calculates RPDs, which are used to assess laboratory precision.

An RPD outside the numerical QC limit in either MS/MSD samples or LCS/LCSD indicates imprecision. Imprecision is the variance in the consistency with which the laboratory arrives at a particular reported result. Thus, the actual analytes concentration may be higher or lower than the reported result.

Possible causes of poor precision include sample matrix interference, improper sample collection or handling, inconsistent sample preparation, and poor instrument stability. In some duplicate pairs, results may be reported in either the primary or duplicate samples at levels below the reporting limit or non-detected. Since these values are considered to be estimates, RPD exceedances from these duplicate pairs do not suggest a significant impact on the data quality.

6.4.2 Accuracy

Accuracy is a measure of the agreement of an experimental determination and the true value of the parameter being measured. It is used to identify bias in a given measurement system. Recoveries outside acceptable QC limits may be caused by factors such as instrumentation, analyst error, or matrix interference. Accuracy is assessed through the analysis of MS, MSD, LCS, and samples containing surrogate spikes. Accuracy of inorganic analyses is assessed using the percent recoveries of MS and LCS analyses.

Percent recovery (%R) is calculated using the following equation:

$$\%R = (A-B)/C \times 100$$

Where:

A = measured concentration in the spiked sample

B = measured concentration of the spike compound in the unspiked sample

C = concentration of the spike

The percent recovery of each analyte spiked in MS/MSD samples, LCS, and surrogate compounds added to environmental samples is evaluated with the acceptance criteria specified by the previously noted documents. The acceptable recovery range for the MS/MDS sample pairs is 75% to 125%. The acceptable recovery range for the LCS is 85% to 115%. Laboratory QA/QC data sheets are included in Appendix B. The percent recovery for all samples was within the acceptance criteria; no samples were rejected.

6.4.3 Representativeness

Representativeness is a qualitative parameter that expresses the degree to which the sample dataset is characteristic of a population. It is evaluated by reviewing the QC results of blank samples and holding times. Positive detects of compounds in the blank samples identify compounds that may have been introduced into the samples during sample collection, transport, preparation, or analysis. The QA/QC blanks collected and analyzed are method blanks.

A method blank is a laboratory-grade water or solid matrix that contains the method reagents and has undergone the same preparation and analysis as the environmental samples. Lead was not detected in the method blanks at concentrations exceeding the laboratory reporting limit of 0.5 mg/kg. Method blank results are included in Appendix B.

6.4.3.1 Method Holding Times

Holding times are evaluated to assure that the sample integrity is intact for accurate sample preparation and analysis. Holding times are specific for each method and matrix analyzed. The holding time for soil samples to be analyzed for TTLC lead is 180 days (US EPA, 2014). Holding times were **not** exceeded for the samples analyzed during this investigation.

6.4.4 Comparability

Comparability is a qualitative expression of the confidence with which one data set may be compared to another. It provides an assessment of the equivalence of the analytical results to data obtained from other analyses. It is important that data sets be comparable if they are used in conjunction with other data sets. The samples were collected under similar field conditions, sampling procedures, and laboratory methodologies and are therefore comparable.

6.4.5 Completeness

Completeness is defined as the percentage of acceptable sample results compared to the total number of sample results. Completeness is evaluated to assess whether an acceptable amount of usable data was obtained so that a valid scientific site assessment can be completed. As specified in the project DQOs, the goal for completeness for target analytes in each analytical fraction is 90%.

Percent completeness is calculated using the following equation:

$$\%C = (T - R)/T \times 100$$

Where:

%C = percent completeness

T = total number of sample results

R = total number of rejected sample results

Completeness is also evaluated by comparing the planned number of samples per method and matrix with the number determined above. No analyses were rejected from the data sets and completeness is 100%.

6.5 Quality Control Soil Analysis Results

The analytical results of the field duplicates are summarized in Table 2. As a measure of sample precision, the analytical results of the field duplicates were compared to those of the co-located primary samples.

As described above, precision is expressed as the relative percent difference (RPD):

$$RPD = (D1 - D2) / \{1/2(D1 + D2)\} \times 100$$

Where D1 and D2 are the reported concentrations for the primary sample and duplicate analyses.

Sample results reported below the method detection limit are considered identical, and no RPD is calculated. Only sample results above the lower reporting limit (LRL) are used in the RPD comparison.

The RPDs for lead duplicate pairs reported above the LRL ranged from 0% to 189% (Table 2). The RPDs show a certain degree of variability in some of the duplicate pairs and appear to be a result of the heterogeneity within the soil or lead distribution. These heterogeneities may be a result of the mechanisms in which the lead was introduced to the soils and the subsequent disturbance of the soils near the sampling points or from mixed sources of lead. These variances do **not** appear to pose a significant bias to the data set.

7 Results of Investigation

7.1 Total Lead Results

Two thousand nine hundred and ninety-four (2,994) soil samples were analyzed for TTLC lead by EPA Method 6010B and are summarized in Table 1. Lead was reported above the PQL (detection limit) in 2,894 of the 2,994 soil samples (96.6%) collected during this investigation. The soil samples exhibited total lead concentrations ranging from 0.205 mg/kg to 781 mg/kg. All reported concentrations of total lead are below the CCR, Title 22 waste disposal criteria of 1,000 mg/kg TTLC lead. Sixty-nine (69) soil samples exceeded 50 mg/kg lead, and therefore were selected to be analyzed for soluble lead by the STLC WET-CA and STLC WET-DI methods. An additional percentage of soil samples were also selected for STLC WET-CA and STLC WET-DI for statistical purposes.

7.1.1 Soluble Lead by STLC WET-CA

Three hundred thirty-five (335) soil samples were analyzed for soluble lead using the STLC WET-CA method. Lead was reported above the detection limit in 249 of the 335 soil samples analyzed. STLC WET-CA concentrations ranged from 0.050 mg/l to 9.41 mg/l and are summarized in Table 1. Only nine (9) samples exceeded the 5 mg/l screening level for soluble lead. These samples were then analyzed for soluble lead using the TCLP method to evaluate if they meet the criteria for classification as US EPA Resource Conservation and Recovery Act (RCRA) hazardous waste.

7.1.2 Soluble Lead by STLC WET-DI

Three hundred thirty-five (335) soil samples were analyzed for soluble lead using the STLC WET-DI method. Lead was reported above the detection limit in 46 of the 335 soil samples analyzed. STLC WET-DI concentrations ranged from 0.010 mg/l to 1.14 mg/l which is below the 5 mg/l soluble lead criteria for soil reuse under the Caltrans/DTSC soil management agreement (DTSC, 2016).

7.1.3 Soluble Lead by TCLP

Nine (9) soil samples were analyzed for soluble lead using the TCLP method. Only those samples that exceeded 5 mg/l for STLC WET-CA were analyzed by this method. Lead was reported above the detection limit in each of the nine soil samples analyzed. TCLP concentrations ranged from 0.018 mg/l to 0.400 mg/l, which is below the 5.0 mg/l criteria for classification as RCRA hazardous waste.

7.1.4 pH

One hundred ninety-eight (198) samples, selected at random, were analyzed for pH using EPA method 9045B. The pH values ranged from 5.84 to 9.48, and are summarized in Table 2. This is

within the non-hazardous waste range of 3 to 12, and is above the 5.5 pH disposal criteria. Lead-impacted soils with pH below 5.5 may not be reused on site.

7.1.5 Statistical Analysis

Leighton Consulting evaluated the results of the soil sample analyses to find the mean and the 95% UCLs for lead in soil in accordance with SW-846, Chapter 9 (EPA, 2014). This evaluation was conducted to evaluate whether the soil would be considered a hazardous waste if excavated or whether it could be reused at the subject site in accordance with the Caltrans/DTSC soil management agreement, for management of soils containing ADL (DTSC, 2016). The soil management agreement uses the 95% UCL on the mean of the total and soluble lead data to evaluate the appropriate disposition of the soil.

Statistical methods were applied to the total and soluble data to analyze the distribution of the data sets (normal, lognormal, gamma, and/or non-parametric), whether there is an acceptable correlation between the total and soluble lead concentrations, and the 95% UCL on the mean value. Statistical methods used during this investigation and the calculated values were generated by using the EPA's statistical program, ProUCL, version 5.1 (US EPA, 2015).

The first step in determining the 95% UCL on the mean is establishing the type of distribution of the data set. Distribution was analyzed by creating histograms of the different data sets, including the non-detected values. The laboratory reporting limit was entered as the sample concentration for each of the non-detect samples. The histograms for the TTLC and STLC WET-CA values indicated a non-parametric distribution; therefore, the data could not be transformed. Histograms for the total and soluble lead concentrations are included in Appendix C.

7.1.6 95% UCL

Once the distribution was confirmed using histograms, the data was again imported into ProUCL. Statistical evaluation of lead analytical results for the complete data set, including non-detects (NDs), was completed to calculate the confidence intervals. The 95% UCL for the population mean for total lead was 12.54 mg/kg. The 95% UCL for soluble lead (STLC WET-CA) was 0.99 mg/l; therefore, the soil does not represent significant environmental or health hazards and can be classified as unregulated. The soil is classified as non-hazardous soil type X according to the DTSC/Caltrans soil management agreement (DTSC, 2016). The soils are below the California Human Health Screening levels for unrestricted land use of 80 mg/kg and do not pose a significant health risk to worker safety (DTSC, 2016).

Statistical analysis results are summarized in Table 3. Laboratory reports are provided in Appendix B, and ProUCL data sheets are provided in Appendix C.

7.1.7 Soluble Lead Statistical Analysis

A comparison of the STLC WET-CA analyses performed on TTLC lead samples greater than and less than the TTLC 95% UCL was performed using a Student's t-test. First the STLC WET-CA data set was divided into two sample populations: the first population included all STLC WET-CA analyses from soil samples that contained less than 12.54 mg/kg of total lead; the second population consisted of STLC WET-CA analyses from soil samples that contained greater than 12.54 mg/kg of total lead. The mean, standard deviation, and variance were calculated for each sample population and the t-test was performed at a 95% significance level ($\alpha = 0.05$). Based on the results of the t-test, there is a greater than 99.99% probability ($p = 2.395E-11$) that the mean of the STLC WET-CA data taken from samples with TTLC lead greater than 12.54 mg/kg is greater than the mean of the STLC WET-CA data taken from samples with TTLC lead less than 12.54.

Laboratory reports are provided in Appendix B and the statistical analysis is provided in Appendix C.

8 Conclusions and Recommendations

The soil samples exhibited total lead concentrations ranging from 0.250 mg/kg to 781 mg/kg. The concentrations of lead detected are below the CCR, Title 22 waste disposal criteria of 1,000 mg/kg TTLC lead. Sixty nine (69) soil samples exceeded 50 mg/kg of total lead and therefore were selected to be analyzed for soluble lead by STLC WET-CA and STLC WET-DI. STLC WET-CA concentrations ranged from 0.025 mg/l to 9.41 mg/l. Nine (9) samples exceeded 5 mg/l and were also analyzed for soluble lead using the TCLP method.

Statistical analysis identified the 95% UCL for the population mean for total lead was 12.54 mg/kg. The 95% UCL for soluble lead (STLC WET-CA) was 0.99 mg/l; therefore, tested soil does not represent significant environmental or health hazards and can be classified as non-hazardous, unregulated soil. The average TTLC lead concentrations are below the DTSC Human and Ecological Risk Office Human Health Risk Assessment Note 3 modified screening level of 80 mg/kg for unrestricted land use (DTSC, 2019).

Based on the ADL Survey data and statistical analysis, tested soil does not represent significant environmental or health hazards and, according to the soil management agreement (DTSC, 2016), the soil can be classified as soil Type X, unregulated, and can be reused on the alignment without restriction. Per the soil management agreement, a Lead Compliance Plan is required for worker safety.

Notes:

TTLIC = Total Threshold Limit Concentration

WET-CA = California Waste Extraction Test using citric acid as the leaching agent

WET-DI = California Waste Extraction Test using deionized water as the leaching agent

TCLP = Toxicity Characteristic Leaching procedure

mg/kg = milligrams per kilogram

mg/l = milligrams per liter

D0343	D0343-2.5	16.8	5.03	108
D0343	D0343-5.0	5.18	11.0	72
D0363	D0363-0.5	16.6	22.8	31

Notes:

RPD = Relative Percent Difference

TTL = Total Threshold Limit Concentration

mg/kg = milligrams per kilogram

Red values are greater than 100% difference and indicate poor precision between primary and duplicate samples

TABLE 3
 Summary of Statistical Analysis for Aerially Deposited Lead
 Interstate 15 ELPSE ADL Survey
 I-15 Post Miles 20.3 through 38.8
 Riverside County, California

TTLC and STLC WET Citric Data Analysis	TTLC	STLC WET Citric (Laboratory Only)
Distribution Type	Non-Parametric	Non-Parametric
Number of Samples, n	2,994	334
Minimum Detected Value	0.25 (mg/kg)	0.025 (mg/L)
Maximum Detected Value	781 (mg/kg)	9.41 (mg/L)
Mean (Average), x	10.58 (mg/kg)	0.665 (mg/L)
Std Deviation of sample set, s	24.64 (mg/kg)	1.364 (mg/L)
95% UCL on data KM (Chebychev) Method	12.54 (mg/kg)	0.99 (mg/L)

NA = not applicable

mg/L = milligrams per liter

UCL = Upper Confidence Level

UCL Methods and values provided by the Environmental Protection Agency's statistical program, ProUCL, Version 4.0

Distribution type was selected based on histograms produced by ProUCL

Dear Ms. Stout:

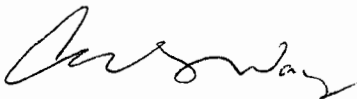

The **analytical results** for the soil and water samples, received by our lab on June 11, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

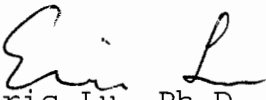

Sincerely,

Curtis Desilets
Vice President/Program Manger

MATRIX:SOIL
SAMPLING DATE:06/10/09
REPORT TO:MS. KRISTIN STOUT

PROJECT No.: 603008001
DATE RECEIVED:06/11/09
DATE ANALYZED:06/15/09
DATE REPORTED:06/18/09

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 6
UNITS: MG/KG = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include sample IDs like A283-0.5, B283-0.5, A282-0.5, etc., with results such as ND, 49.5, 2.34, 7.79, 11.5, and a PQL of 0.50.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

EPA 6010B FOR STLC-LEAD
UNIT: MG/L IN THE STLC LEACHATE

Table with 4 columns: SAMPLE I.D., LAB I.D., STLC-LEAD RESULT, DF. Rows include B282-0.5 (1.61), Method Blank (ND), and PQL (0.05).

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
STLC = Soluble Threshold Limit Concentration
MG/L = Milligram Per Liter = PPM
* = STLC-DI Water Extraction will be performed (if marked)
*** = The concentration exceeds the STLC Limit @ 5 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Lab I.D.: **090611-23 through -117**

Dear Ms. Stout:

The **additional STLC-Pb results** for the soil and water samples, received by our lab on June 11, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

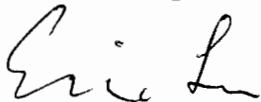

Sincerely,

Curtis Desilets

Project: **I-15 CIP ADL Survey**
Project No.: **603008001**
Lab I.D.: **090612-29 through -122**

Dear Ms. Stout:

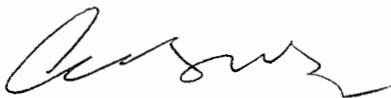

The **analytical results** for the soil and water samples, received by our lab on June 12, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manger

Andy Wang
Laboratory Manager

PROJECT: I-15 CIP ADL Survey PROJECT No.: 603008001
MATRIX: SOIL DATE RECEIVED: 06/12/09
SAMPLING DATE: 06/11/09 DATE ANALYZED: 06/17-19/09
REPORT TO: MS. KRISTIN STOUT DATE REPORTED: 06/19/09

EPA 6010B FOR STLC-LEAD
UNIT: MG/L IN THE STLC LEACHATE

Table with 4 columns: SAMPLE I.D., LAB I.D., STLC-LEAD RESULT, DF. Rows include B269-0.5, B764-1.0, A263-0.5, A263-5.0, Method Blank, and PQL.

COMMENTS:

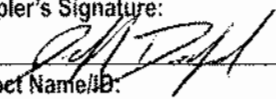

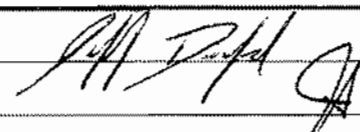

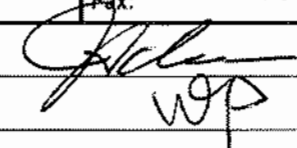

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
STLC = Soluble Threshold Limit Concentration
MG/L = Milligram Per Liter = PPM
* = STLC-DI Water Extraction will be performed (if marked)
*** = The concentration exceeds the STLC Limit @ 5 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Dear Ms. Stout:

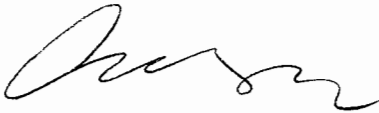

The **analytical results** for the soil and water samples, received by our lab on June 16, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

Lab I.D.: **090617-82 through -170**

Dear Ms. Stout:

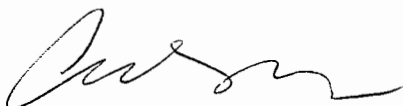

The **analytical results** for the soil and water samples, received by our lab on June 17, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

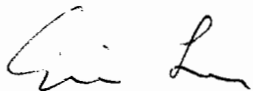

Sincerely,

Curtis Desilets
Vice President/Program Manger

B246-0.5	090617-121	40.3	1
Method Blank	---	ND	1

PQL 0.50

COMMENTS:

DF = Dilution Factor
 PQL = Practical Quantitation Limit
 Actual Detection Limit = DF X PQL
 ND = Non-Detected or below the Actual Detection Limit
 TTLC = Total Threshold Limit Concentration
 STLC = Soluble Threshold Limit Concentration
 STLC Limit for lead = 5 PPM
 * = STLC analysis is recommended (if marked)
 *** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Lab I.D.: **090618-111 through -175**

Dear Ms. Stout:

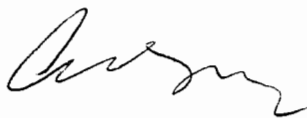

The **analytical results** for the soil and water samples, received by our lab on June 18, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Dear Ms. Stout:

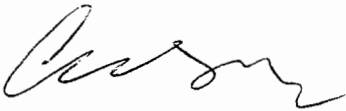

The **analytical results** for the soil and water samples, received by our lab on June 19, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 5
UNITS: MG/KG = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include various sample IDs (B230, A229, B226, A225) and their corresponding results and dilution factors. Includes a Method Blank row and a PQL (0.50) row.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Dear Ms. Stout:

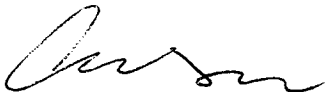

The **analytical results** for the soil and water samples, received by our lab on June 23, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

PROJECT: **I-15 CIP ADL Survey**

PROJECT No.: **603008001**

MATRIX: SOIL

DATE RECEIVED: 06/23/09

SAMPLING DATE: 06/22/09

DATE ANALYZED: 06/24-26/09

REPORT TO: MS. KRISTIN STOUT

DATE REPORTED: 06/29/09

EPA 6010B FOR STLC-LEAD
UNIT: MG/L IN THE STLC LEACHATE

SAMPLE I.D.	LAB I.D.	STLC-LEAD RESULT	DF
<u>A204-0.5</u>	<u>090623-59</u>	<u>ND</u>	<u>1</u>
<u>A191-0.5</u>	<u>090623-124</u>	<u>3.79</u>	<u>1</u>
<u>Method Blank</u>	<u>---</u>	<u>ND</u>	<u>1</u>
	PQL	0.05	

COMMENTS:

DF = Dilution Factor

PQL = Practical Quantitation Limit

Actual Detection Limit = DF X PQL

ND = Non-Detected or below the Actual Detection Limit

STLC = Soluble Threshold Limit Concentration

MG/L = Milligram Per Liter = PPM

* = STLC-DI Water Extraction will be performed (if marked)

*** = The concentration exceeds the STLC Limit @ 5 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Dear Ms. Stout:

The **analytical results** for the soil and water samples, received by our lab on June 24, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

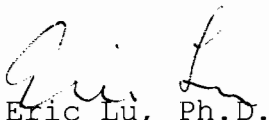

Sincerely,

Curtis Desilets

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 4
UNITS: MG/KG = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include samples B190-0.5 through A187-1.0 and a Method Blank row.

PQL 0.50

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Dear Ms. Stout:

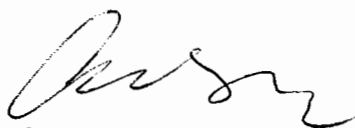

The **analytical results** for the soil and water samples, received by our lab on June 25, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

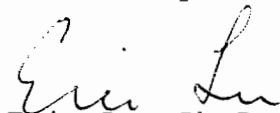

Sincerely,

Curtis Desilets

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 5
UNITS: MG/KG = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include samples A179-0.5 through B178-5.0 and a Method Blank row.

PQL 0.50

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Lab I.D.: **090626-46 through -125**

Dear Ms. Stout:

The **analytical results** for the soil and water samples, received by our lab on June 26, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

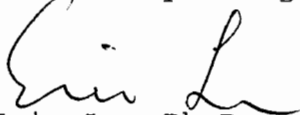

Sincerely,

Curtis Desilets

MATRIX: SOIL DATE RECEIVED: 06/26/09
SAMPLING DATE: 06/25/09 DATE ANALYZED: 06/29/09
REPORT TO: MS. KRISTIN STOUT DATE REPORTED: 07/07/09

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 5
UNITS: MG/KG = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include B124-0.5, B124-1.0, B124-2.5, B124-5.0, A123-0.5, A123-1.0, A123-2.5, A123-5.0, A119-0.5, A119-1.0, A119-2.5, Method Blank, and PQL.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Lab I.D.: **090722-87 through -151**

Dear Ms. Stout:

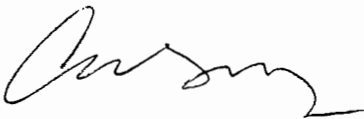

The **analytical results** for the soil and water samples, received by our lab on July 22, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manger

REPORT TO: MS. KRISTIN STOUT DATE REPORTED: 07/29/09

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 4
UNITS: mg/Kg = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include samples B112-0.5 to B116-1.0 and a Method Blank. Results range from 1.94 to 75.7 mg/Kg. PQL is 0.50.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Lab I.D.: **090722-87 through -151**

Dear Ms. Stout:

The **additional STLC/STLC-DI/TCLP-Pb results** for the soil and water samples, received by our lab on July 22, 2009, are attached. The samples were received chilled, intact, accompanying chain of custody and also stored per the EPA protocols.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

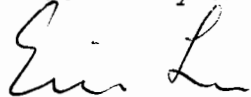

Sincerely,

Curtis Desilets
Vice President/Program Manger

Project: **I-15 CIP ADL Survey**
Project No.: **603008001**
Lab I.D.: **090723-5 through -68**

Dear Ms. Stout:

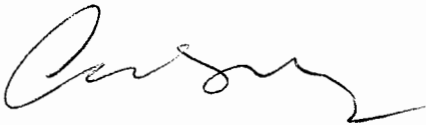

The **analytical results** for the soil and water samples, received by our lab on July 23, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

Dear Ms. Stout:

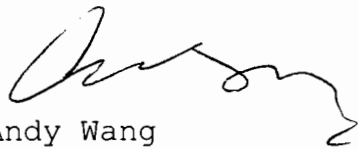

The **analytical results** for the soil and water samples, received by our lab on July 24, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

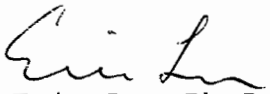

Sincerely,

Curtis Desilets

Dear Ms. Stout:

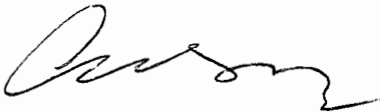

The **analytical results** for the soil and water samples, received by our lab on July 28, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

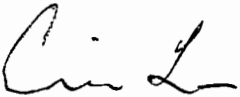

Sincerely,

Curtis Desilets

PQL 0.50

COMMENTS:

DF = Dilution Factor

PQL = Practical Quantitation Limit

Actual Detection Limit = DF X PQL

ND = Non-Detected or below the Actual Detection Limit

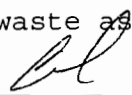

TTLC = Total Threshold Limit Concentration

STLC = Soluble Threshold Limit Concentration

STLC Limit for lead = 5 PPM

* = STLC analysis is recommended (if marked)

*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Project: **I-15 CIP ADL Survey**
Project No.: **603008001**
Lab I.D.: **090729-17 through -89**

Dear Ms. Stout:

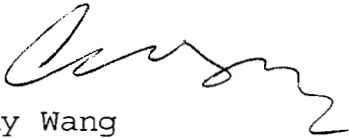

The **analytical results** for the soil and water samples, received by our lab on July 29, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets
Vice President/Program Manger

Andy Wang

Dear Ms. Stout:

The **analytical results** for the soil and water samples, received by our lab on July 31, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

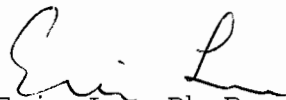

Sincerely,

Curtis Desilets

Dear Ms. Stout:

The **STLC-Pb result** for the soil and water samples, received by our lab on July 31, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

Sincerely,

Curtis Desilets

PROJECT: I-15 CIP ADL Survey
MATRIX: SOIL
SAMPLING DATE: 08/03/09
REPORT TO: MS. KRISTIN STOUT

PROJECT No.: 603008001
DATE RECEIVED: 08/04/09
DATE ANALYZED: 08/10-12/09
DATE REPORTED: 08/12/09

EPA 6010B FOR STLC-LEAD
UNIT: MG/L IN THE STLC LEACHATE

Table with 4 columns: SAMPLE I.D., LAB I.D., STLC-LEAD RESULT, DF. Rows include A181-0.5, A194-0.5, A694-0.5, B705-0.5, B206-0.5, Method Blank, and PQL.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
STLC = Soluble Threshold Limit Concentration
MG/L = Milligram Per Liter = PPM
* = STLC-DI Water Extraction will be performed (if marked)
*** = The concentration exceeds the STLC Limit @ 5 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

Data Reviewed and Approved by: [Signature]

Dear Ms. Stout:

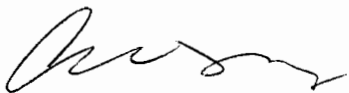

The **analytical results** for the soil and water samples, received by our lab on August 5, 2009, are attached. The samples were received chilled, intact and with chain of custody record.

Enviro-Chem appreciates the opportunity to provide you and your company this and other services. Please do not hesitate to call us if you have any questions.

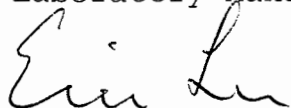

Sincerely,

Curtis Desilets

DATE REPORTED: 08/11/09

EPA 6010B FOR TTLC-LEAD; PAGE 1 OF 4
UNITS: mg/Kg = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, DF. Rows include samples A206-0.5 through B207-1.0 and a Method Blank. A PQL value of 0.50 is also listed.

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)

EPA 6010B FOR TTLC-LEAD; PAGE 2 OF 4
UNITS: mg/Kg = MILLIGRAM PER KILOGRAM = PPM

Table with 4 columns: SAMPLE I.D., LAB I.D., TTLC-LEAD RESULT, and DF. It lists various sample IDs (e.g., B207-2.5, A207-0.5) and their corresponding results and dilution factors.

PQL 0.50

COMMENTS:

DF = Dilution Factor
PQL = Practical Quantitation Limit
Actual Detection Limit = DF X PQL
ND = Non-Detected or below the Actual Detection Limit
TTLC = Total Threshold Limit Concentration
STLC = Soluble Threshold Limit Concentration
STLC Limit for lead = 5 PPM
* = STLC analysis is recommended (if marked)
*** = The concentration exceeds the TTLC Limit @ 1000 PPM, therefore the sample is defined as hazardous waste as per CCR-TITLE 22 (if marked)
