Citation: 23 CCR 16 2632(c)(2)(A)&(B) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(c)(2)(A)&(B)
Violation Description: Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.
Violation Notes: Returned to compliance on 10/07/2019. OBSERVATION: Observed 304 sensor not properly operating at 91 octane fail to activate an audible and visual alarm when tested. Operator replaced nonfunctional sensor with another 304 sensor. Violation corrected during inspection. CORRECTIVE ACTION: Owner/operator shall repair/replace inoperable 304 sensor at 91 octane and certify that sensor will activate an audible visual alarm when a leak is detected.

Violation Date: 10/9/2018
Citation: HSC 6.7 25292.1(a) - California Health and Safety Code, Chapter 6.7, Section(s) 25292.1(a)
Violation Description: Failure to operate the UST system to prevent unauthorized releases including leaks, spills, and/or overfills.
Violation Notes: Returned to compliance on 10/07/2019. OBSERVATION: Observed L15 low liquid alarm in the vent sump at the time of inspection. The sump is dry and clean. Leak seems to be occurring on the exterior of the sump. CORRECTIVE ACTION: Owner/operator shall immediately make the necessary repairs to the vent box to eliminate the unauthorized discharge of brine. Once the cause of leak is determined notify plan check lead Lester Powell at the Corona Office (951)273-9143 to determine if a UST plan check permit will be required for this repair.

Site Zip: 92883
Enf Action Date: 12-15-2015
Enf Action Type: AEO - Unified Program
Enf Action Description: Administrative Enforcement Order Based on the Unified Program Statute
Enf Action Notes: On October 14, 2015 a routine underground storage tank (UST) inspection was conducted. During the inspection, it was determined that the UST VPH system was not constructed with a monitoring system capable of detecting entry into the secondary containment of the diesel vacuum zone. 1. It was observed that the vacuum tubing on the diesel product was pinched off with a zip tie. 2. It was also observed that the vacuum tubing was split from the test boots. 3. It was observed that the S9 diesel product line sensor was disconnected from the diesel product line, therefore not monitoring the secondary containment per manufactures specifications. .

Case Worker: YR
RB Case Number: 083304042T
Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency Warehouse
Local Case Number: 200622897
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel
Site History: In 1981, two 10,000-gallon underground storage tanks (USTs) with two accompanying dispensers were installed at the northeastern edge of the property. On July 16, 1998 this UST system was removed in preparation for replacement upgrades, which met current industry and regulatory standards. Upon the removal of this UST system, soil samples were collected from beneath each end of the tanks and their respective dispensers. Analytical results from these soil samples indicated the presence of diesel contaminants ranging from 3.8 ppm to 4,000 ppm beneath the east ends of each tank and below the western dispenser. On July 17, 1998, immediately following the removal of the former system, a single 15,000-gallon Glasteel Jacketed Steel UST was installed in the excavation of the former UST system. All original soils excavated during the UST removal were used as backfill during the installation of this UST system. RCDEH issued a no further action letter. The 15,000-gallon UST system was subsequently removed on August 1, 2006. As in the previous removal activities, soil samples were collected beneath the UST and dispenser. A total of three (3) samples were collected and representative samples, were delivered to a State-Certified laboratory, under proper chain of custody, and analyzed for potential diesel and associated volatile organic compounds (VOCs) contamination. Results from these laboratory analyses identified the presence of diesel and VOC contaminants in one of the three samples collected. The sample collected beneath the former dispenser/turbine location at 11.5 feet below ground surface (bgs) showed diesel contamination at 370 ppm. Due to the detectable levels of diesel fuel identified from the sampling activities at this site, the CRDEH-LOP has required further subsurface delineation of the contaminant immediately surrounding the former UST. Additional subsurface site assessment activities were conducted on December 11 & 12, 2006, to further delineate the extent of soils impacted beneath the tank systems eastern end of the 15,000-gallon diesel fuel UST system. Advancing a total of three (3) borings, each to 60 feet bgs. The first boring, (B-1) was advanced vertically through the location of the former dispenser, which was located at the east end of the former 15,000-gallon UST. The second boring (B-2) was advanced vertically, 20 feet northerly from B-1, and 12 feet southerly from the property line of the adjacent property to the north of the subject site. The third boring (B-3) was advanced 20 feet northeasterly from boring B-1 and 20 feet easterly from boring B-2. Soil samples were collected at 5 ft intervals starting at 5 ft bgs and ending at 60 ft bgs. Diesel contamination was identified in five samples at 14 ppm (B2@55), 16 ppm (B2@60), 66 ppm (B3@50), 27 ppm (B3@55), 26 ppm (B3@60). Toluene was identified in 5 samples at 0.002 ppm (B1@40 and 60), 0.002 ppm (B2@40), 0.004 ppm (B2@45), 0.002 ppm (B3@60). No other VOCs were detected. 8260 Full-scan run. RCDEH required further assessment based on the following: 1) Detections in the bottom of the boring and lack of 40-ft clean zone; 2) Close proximity to Temescal Creek; and 3) Lack of nearby depth to groundwater data. Groundwater Monitoring and Verification: One groundwater monitoring well was installed on October 12, 2007. Soil

samples were collected at 5 ft intervals beginning at 5 ft bgs to 50 ft bgs. Well is screened between 40 ft to 62 ft bgs. All soil samples were ND for all constituents tested. Maximum groundwater concentrations from the grab groundwater sample were 0.43 ppm TPHd, and 2.4 ppb 1,1-Dichloroethene. ND for all other constituents tested. Five groundwater monitoring events were conducted between October 2007 and August 2009. Water levels have fluctuated from 49.65 ft bgs to 52.20 ft bgs. Flow direction is estimated to be easterly towards Temescal Wash. Maximum groundwater concentrations during monitoring events were: 0.43 ppm TPHd, 3.2 ppb 1,1-Dichloroethene, 0.67 ppb Trichlorofluoromethane, 10 ppb Trichloroethene. ND for all other constituents tested. Remediation: No active remediation has taken place. All initial concentrations remain in-situ. Soil types: Well sorted fine to coarse grained sands throughout with thin layers of clayey sands. Historical Depth To GW: 49.65 ft bgs to 52.20 ft bgs Current Depth To GW: 50.66 ft bgs GW Flow: Easterly towards Temescal Wash Remediation: All initial concentrations remain in-situ. No remediation has taken place. Nearest Sensitive Receptor: The site is located approximately 1300 feet east from Temescal Wash and is within the recharge zone for Temescal Creek. Nearest municipal well is approximately 1.27 miles southeast of the site. The monitoring well was destroyed. RCDEH issued NFA letter dated 9/16/2010.

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 109193
Site Name: Curt's Diesel Repair
Violation Date: 9/3/2015
Citation: 22 CCR 15 66265.196 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.196

Violation Description: Failure to properly respond to a spill/leak with the following requirements: a) General emergency procedures as required in section 66265.56. b) Cessation of use; prevention of flow or addition of wastes into the tank system or secondary containment system and inspect the system to determine the cause of the release. c) Removal of waste from tank system or secondary containment system: 1) If the release was from the tank system, the owner or operator shall, within 24 hours after detection of the leak or, if the owner or operator demonstrates that that is not possible, at the earliest practicable time remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed. 2) If the release was to a secondary containment system, all released materials shall be removed within 24 hours or in as timely a manner as is possible to prevent harm to human health and the environment. d) The owner or operator shall immediately conduct a visual inspection of the release and, based upon that inspection: 1) Prevent further migration of the leak or spill to soils or surface water; and 2) Remove, and properly dispose of, any visible contamination of the soil or surface water. e) Notifications, reports; 1) Any release to the environment, except as provided in subsection e)2) of this section, shall be reported within 24 hours of detection. 2) A leak or spill of hazardous waste is exempted from the requirements of subsection (e) of this section, but is not exempted from the requirements of section 66265.56, if it is: A) less than or equal to a quantity of one (1) pound, and B) Immediately contained and cleaned-up. 3) Within 30 days of detection of a release to the environment, a report containing the following information shall be submitted: A) Likely route of migration of the release; B) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate); C) Results of any monitoring or sampling conducted

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RB Case Number: Not reported
Local Agency: RIVERSIDE COUNTY LOP
File Location: Local Agency
Local Case Number: 200319347
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: On November 22, 2002, soil samples were taken during dispenser and piping upgrades. MTBE was detected in 10 of 19 samples up to 0.86 ppm. The site was placed into the LOP program for further assessment. In July 2003, three angle soil vapor extraction wells (B-1, B-2, and B-3) were installed to depths of approximately 45 feet below ground surface (bgs). TPHg and benzene were not detected in any of the soil samples analyzed. MTBE was detected in nine of the 27 soil samples with a high of 17 ppm MTBE detected at 40 ft bgs in boring B-1. Soil vapor extraction wells screened from 5 ft to 45 ft bgs were installed in the borings. Groundwater was not encountered; however, the Mobil station across the street has a water table at 41ft bgs. Based on the results of this assessment the installation of groundwater monitoring wells were required. In September 2003, three groundwater monitoring wells (MW-4, MW-5, and MW-6) were installed. MW-4 was installed to approximately 65 ft bgs. MW-5 and MW-6 were installed to approximately 70 ft bgs. Groundwater was encountered between 42 ft and 53 ft bgs. MW-4 was screened from 35 ft to 65 ft bgs and MW- 5 and MW-6 were screened from 40 ft to 70 ft bgs. All soil samples were ND for TPHg. Benzene was detected in two soil samples at 0.0018 ppm (MW-6@65 ft) and 0.00072 ppm (MW-6@70 ft). MTBE was detected in three samples at 0.0090 ppm (MW-4@50 ft), 0.0021 ppm (MW-4@55ft), and 0.0023 ppm (MW-6@55 feet). In March 2007, the consultant requested closure as the leak has been stopped, the site was adequately characterized, the groundwater plume is stable, and the site presents no significant threat to the environment. In April 2007, closure was denied as the well screens were submerged and the 17 ppm MTBE was not addressed. The RCDEH required groundwater sampling from all the wells (monitoring and SVE), and based on those results, soils remediation may be needed. On July 3, 2007, six wells were sampled (three groundwater monitoring wells and three SVE wells). No TPHg, BTEX or oxygenates detected in any well. Groundwater elevations in monitoring well MW-5 were still above the screen interval. The water level ranged from 36.5 to 39.46 ft bgs, above the level where the 17 ppm MTBE was detected at 40 ft bgs in the soil. The consultant recommended the site be reviewed for closure. In December 2007, closure was considered but denied based on 17 ppm MTBE found at 40 ft bgs in well B-1. Assessment is required in the area downgradient from the southwest dispenser. No down gradient wells have been installed in this area. January/February 2008, Soil samples were collected during dispenser piping upgrade and pump island extension work. Station improvements include three UST s, four dispenser islands, and a convenience store. Samples were collected beneath four dispenser islands (DISP-1-3 through DISP-4-3) and six product lines (PL-1-3 through PL-6-3) using a hand auger. On February 6, 2008, composite soil samples were collected from the two stockpiles (SP-1 and SP-2) and one additional soil sample was collected from beneath product line (PL-7-3). All samples collected contain lead ranging from 3.7

S101631101

ppm (DISP-1-3) to 8.6 ppm (SP-1). All samples were ND for TPHg, BTEX, MTBE, DIPE, ETBE, TAME, TBA or ethanol. In Feb 2008, soil vapor extraction well B-3 and ground water monitoring well MW-6 were destroyed due to construction activities on the east side of the dispensers. In April 2008, monitoring well MW-7 was installed downgradient of B-1. The purpose of the assessment was to further define the extent of dissolved hydrocarbons in groundwater downgradient from dispenser #1. The monitoring well was installed 15 ft north of purposed area due to underground utilities. The well was completed to 50 ft bgs and screened between 30 ft to 50 ft bgs. Groundwater was encountered at approximately 39- 40 ft bgs. Groundwater samples were ND for all constituents tested except 0.42J ppb toluene and 50J ppb naphthalene. Soil samples were collected every 5 feet. All soil samples were ND for all constituents tested (TPHg, BTEX, MTBE, DIPE, ETBE, TAME, TBA and Ethanol). In January 2009, the consultant recommended site closure based on non-detect results from groundwater samples. Groundwater elevations in monitoring well MW-5 were still above the screen interval. Groundwater was within the screened zone in B-1, B-2, MW-4, and MW-7. In May 2009, RCDEH and the SARWQCB reviewed the site for closure and were concerned about the 17 ppm MTBE detected in the submerged soil sample at 40 feet from boring B-1 near the dispenser. Additional sampling or vapor testing in this area was required to explain the concentration of MTBE detected in soil and not reflected in groundwater sampling results. In September 2009, RCDEH and the SARWQCB concurred with case closure based on information obtained from a site visit on September 15, 2009. Groundwater monitoring well MW-7 was observed to be 10 feet from the dispenser and not 20 feet as depicted on site maps submitted in reports. Additional sampling was not required and assessment was considered complete. Groundwater Monitoring Groundwater monitoring and sampling activities began in November 2003. Monitoring wells B-1 and B-2 were installed on July 3, 2007 and have been ND for all constituents tested since installation (nine quarters). Monitoring wells B-3 was also installed on July 3, 2007, and ND for all constituents tested for three quarters until it was destroyed on February 1, 2008 due to construction activities. Monitoring wells MW-4 and MW-5 were installed on November 5, 2003. Groundwater monitoring well MW-4 has been ND for all constituents tested except for MTBE which was detected at a maximum concentration of 75 ppb in August 2005. MW-4 has been ND for all constituents test, including MTBE, for the last nine quarters. MW-4 had a submerged screen between March 2005 and October 2006. Groundwater monitoring well MW-5 has had a submerged screen since December 2004 and has been ND for all constituents tested since installation. Groundwater monitoring well MW-6 was installed on November 5, 2003 and destroyed on February 1, 2008 due to construction activities. MW-6 was ND for all constituents tested except for a maximum concentration of MTBE at 56 ppb in August 2004 and 1.8J ppb methyl chloride. MW-6 had a submerged screen between May 2005 and January 2007. Groundwater monitoring well MW-7 was installed in April 2008, and has been ND for all constituents tested except 0.42J ppb Toluene. A final groundwater sampling event was conducted on July 1, 2009. All five wells were sampled and ND for all constituents tested except: bromodichloromethane at 0.46J ppb (MW-7) and 0.35J ppb (B-1); chloroform at 0.49 ppb (MW-7) and 0.48 ppb (B-1); and dibromochloromethane at 0.57J ppb (MW-7) and 0.49 ppb (B-1). Case closed 6/16/2010

CERS Description: Chemical Storage Facilities

Violations:

Site ID: 63870
Site Name: SAF Inc.
Violation Date: 6/15/2017
Citation: 40 CFR 1 265.33 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.33

Violation Description: Failure to test and maintain as necessary all facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment to assure its proper operation in time of emergency.

Violation Notes: Returned to compliance on 05/23/2018.
Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 63870
Site Name: SAF Inc.
Violation Date: 5/4/2020
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 06/03/2020. OBSERVATION: Observed five 55 gallon waste drums full and in need of immediate disposal on site with no accumulation start date due to fading of the hazwaste labels. CORRECTIVE ACTION: Owner/operator shall ensure all hazardous wastes are transported off site within 180 days of the accumulation start date. Owner/operator shall have all five 55 gallon liquid hazardous waste properly hauled off site by a registered hazardous waste transporter.

Violation Division: Riverside County Department of Env Health
Violation Program: HW
Violation Source: CERS

Site ID: 63870
Site Name: SAF Inc.
Violation Date: 5/4/2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

OSHA ESTABLISHMENT

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best

Lead Agency: RIVERSIDE COUNTY LOP
Case Type: LUST Cleanup Site
Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0606510037
Global Id: T0606510037
Latitude: 33.693347668
Longitude: -117.33577341
Status: Completed - Case Closed
Status Date: 01/13/2011
Case Worker: Not reported
RB Case Number: Not reported
Local Agency: Not reported
File Location: Local Agency Warehouse
Local Case Number: 200118158
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History:

Data prior to 2005 does not appear in GeoTracker. Consult agency file for all site data On November 29, 2001, 11 soil samples were taken beneath the dispensers and product lines for a fuel system upgrade. Up to 7.9 ppm TPH and 230 ppb MTBE was detected. The site was placed into LOP. On April 2, 2002, 4 borings were drilled to 40 . Up to 740 ppb MTBE (35) was detected in the soil. In mid-December 2002, three groundwater wells were installed. The wells were screened from 25 to 55 . Up to 1200 ppb MTBE (30) and 600 ppb TBA (40) were detected in the soil. On Nov. 17 and 18, 2003, four additional wells were installed. The wells were screened from 23-53 , 18-48 , and 20-50 . Up to 16000 ppb MTBE (30 and 35) and 19000 ppb TBA (20) were detected in the soil. 3 additional wells were installed January 28 and 29, 2004. The wells were screened from 20-50 and 25-50 . Up to 3500 ppb MTBE (25) and 1900 ppb TBA (40) were detected in the soil. One final well was installed September 2004. No oxygenates were detected in the oil except for one hit of DIPE at 0.022J at 35 . Dual Phase Vacuum Extraction was operated on site using 6 wells from October 13, 2005 to June 12, 2006 running one month a quarter. The system operated 1981 hours and removed 31751 gallons of water 725 pounds of VOC s and 85 pounds of TPHg. TPHg vapor influent went from 96 ppmv to <10 ppmv. MTBE went from 37 to 0.68 ppmv. Four confirmation borings were drilled to 40 November 5, 2007 and sampled every 5 . All constituents were ND except for MTBE which had two hits of 2.3J and 2.7J ppb. The groundwater was sampled from January 2, 2003 until November 14, 2007. TPHg decreased from 12500 ppb to <100 ppb. Benzene decreased from 29 ppb to <0.5 ppb and has not been detected above 1 ppb since November 2005. MTBE decreased from 12000 ppb to 1.4 ppb. TBA decreased from 135000 ppb to <10 ppb. 1/13/2011 Closure/no further action letter issued by RCDEH.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date: 7/23/2015
Citation: 22 CCR 15 66265.196 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.196

Violation Description: Failure to properly respond to a spill/leak with the following requirements: a) General emergency procedures as required in section 66265.56. b) Cessation of use; prevention of flow or addition of wastes into the tank system or secondary containment system and inspect the system to determine the cause of the release. c) Removal of waste from tank system or secondary containment system: 1) If the release was from the tank system, the owner or operator shall, within 24 hours after detection of the leak or, if the owner or operator demonstrates that that is not possible, at the earliest practicable time remove as much of the waste as is necessary to prevent further release of hazardous waste to the environment and to allow inspection and repair of the tank system to be performed. 2) If the release was to a secondary containment system, all released materials shall be removed within 24 hours or in as timely a manner as is possible to prevent harm to human health and the environment. d) The owner or operator shall immediately conduct a visual inspection of the release and, based upon that inspection: 1) Prevent further migration of the leak or spill to soils or surface water; and 2) Remove, and properly dispose of, any visible contamination of the soil or surface water. e) Notifications, reports; 1) Any release to the environment, except as provided in subsection e)2) of this section, shall be reported within 24 hours of detection. 2) A leak or spill of hazardous waste is exempted from the requirements of subsection (e) of this section, but is not exempted from the requirements of section 66265.56, if it is: A) less than or equal to a quantity of one (1) pound, and B) Immediately contained and cleaned-up. 3) Within 30 days of detection of a release to the environment, a report containing the following information shall be submitted: A) Likely route of migration of the release; B) Characteristics of the surrounding soil (soil composition, geology, hydrogeology, climate); C) Results of any monitoring or sampling conducted

Violation Notes: Returned to compliance on 08/27/2015.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 3/2/2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: Returned to compliance on 02/13/2019. OBSERVATION: The most recent business plan submission in the statewide information management system (CERS) failed to contain a chemical inventory description page for red dyed diesel. CORRECTIVE ACTION: Owner/operator shall complete a chemical inventory page for all reportable hazardous materials on site and submit to the statewide information management system at <http://cers.calepa.ca.gov>. Additionally, please adjust the maximum daily amounts for oxygen and the motor oil to reflect the current amounts stored onsite.

Eval Notes: Facility manufactures clay pipe products. The hazardous materials stored onsite include latex solutions, epoxy, grease, motor oils, red dyed diesel, propane, oxygen, acetylene, and barium carbonate. Notes: Please label empty containers as "Empty." NFPA signs at the front gate entrance and on the oil storage room are fading and will require replacement in the near future.

CERS:

Name: DOWNS ENERGY-LAKE ELSINORE
Address: 501 N SPRING ST
City,State,Zip: LAKE ELSINORE, CA 92530
Site ID: 112548
CERS ID: 10475929
CERS Description: Chemical Storage Facilities

Violations:

Site ID: 112548
Site Name: Downs Energy-Lake Elsinore
Violation Date: 4/13/2016
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violation Notes: Returned to compliance on 04/13/2016.
Violation Division: Riverside County Department of Env Health
Violation Program: UST
Violation Source: CERS

Site ID: 112548
Site Name: Downs Energy-Lake Elsinore
Violation Date: 4/13/2016
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291
Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.
Violation Notes: Returned to compliance on 04/13/2016.

AIR EMISSIONS CLASSIFICATION UNKNOWN
OSHA ESTABLISHMENT
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: 6.95, Section(s) 25508(a)(1)
Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 11/06/2019. OBSERVATION: Owner/operator has previously submitted a business plan into the statewide information management system which had one or more sections rejected. Specifically, Hazardous Materials Inventory section were rejected for not meeting minimum standards. The facility failed to input additional hazmat the facility handles (i.e. Oxygen and additional acetylene cylinders). CORRECTIVE ACTION: Owner/operator shall review the rejection comments attached to the previously submitted business plan, make required corrections, and resubmit corrected sections into the statewide information management system at <http://cers.calepa.ca.gov>.

WDS:

Name: STORM CORONA
Address: 23200 TEMESCAL CANYON RD
City: CORONA
Facility ID: Santa Ana River 331000094
Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board
Subregion: 8
Facility Telephone: Not reported

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-05-2019
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility is a SQG generating non-RCRA waste ink. Operator recently had their waste hauled off today and 55 gallon drums were not labeled. Observed new issued label on table nearby. Ensure to affix label onto drums. Observed only 2 years of manifest available during inspection (2018 and 2016). Operator was unable to get the 2017 for viewing during inspection. Ensure to provide at least the most recent 3 years of manifest records at next routine inspection.

Eval Division: Riverside County Department of Env Health
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-18-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Facility no longer generates hazardous waste and will be removed from the hazardous waste generator program. All hazardous waste was picked up by a registered hauler for disposal. Hazardous wastes generated in the past included ink, cleaning solvents, and contaminated rags used for silk screening. Owner/operator shall ensure a permit is obtained if the facility begins to generate hazardous waste again in the future.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 11/2/2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/06/2019. OBSERVATION: The chemical inventory description page submitted for all the chemicals does not include the new federal hazard classes. Additionally, update the sealer units to gallons not pounds, as it is stored. Also, include the joint stabilizer sealer in your chemical inventory. CORRECTIVE ACTION: Owner/operator shall update the chemical inventory page for all chemicals and submit to the statewide information management system at <http://cers.calepa.ca.gov>. Missing information may be found by looking at the chemical safety data sheet. Owner/operator shall include a chemical inventory page for the stabilizer sealer.

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-17-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The discharge points along the back of the facility have recently been blocked to prevent Stormwater from flowing to the drainage area behind the facility. The remaining discharge point at the site is in the middle of the facility where the site transitions from the industrial area to the area proposed to be paved with pavers. The site is noted as a Level 2 ERA site for TSS. Loose dirt may be found at this discharge location that is noted in the SWPPP as a sampling point. This location is designated as a sampling point for the facility as it discharges to the Construction NOI portion of the site. This construction area is where product is stored. The down gradient side of the lot has berms placed to prevent discharge from the lot.

Site Name: ACKER STONE INDUSTRIES
Violation Date: 9/22/2015
Citation: 19 CCR 6.95 25508(a)(1) - California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes: Returned to compliance on 05/13/2016.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 384164
Site Name: ACKER STONE INDUSTRIES
Violation Date: 11/2/2018
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 02/06/2019. OBSERVATION: No annual business plan certification was observed in the statewide information management system. A notice was previously mailed from RivCo DEH requiring submission of a business plan. CORRECTIVE ACTION: Owner/Operator shall submit an updated business plan in the statewide information management system at <http://cers.calepa.ca.gov> in accordance with the letter(s) previously sent to this facility. The compliance deadline for this violation will be pursuant to the date specified in the letter mailed to you by this Department, rather than 30 days from the date of this report. Business plans shall be reviewed and certified on at least an annual basis.

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 09-11-2013
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Not reported
Eval Division: Riverside County Department of Env Health
Eval Program: HMRRP
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 09-17-2019
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: The discharge points along the back of the facility have recently been blocked to prevent Stormwater from flowing to the drainage area behind the facility. The remaining discharge point at the site is in the middle of the facility where the site transitions from the industrial area to the area proposed to be paved with pavers. The site is noted as a Level 2 ERA site for TSS. Loose dirt may be found at this discharge location that is noted in the SWPPP as a sampling point. This location is designated as a sampling point for the facility as it discharges to the Construction NOI portion of the site. This construction area is where product is stored. The down gradient side of the lot has berms placed to prevent discharge from the lot.

Violation Source: SMARTS

Site ID: 384164
Site Name: ACKER STONE INDUSTRIES
Violation Date: 10/10/2018
Citation: HSC 6.95 25508.2 - California Health and Safety Code, Chapter 6.95, Section(s) 25508.2
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 02/06/2019.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 384164
Site Name: ACKER STONE INDUSTRIES
Violation Date: 11/2/2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 02/06/2019. OBSERVATION: Site map submitted in CERS does not include all chemical storage and/or hazardous waste storage areas. CORRECTIVE ACTION: Owner/operator shall complete an annotated site map which includes all elements outlines in CA Health and Safety Code and submit into the statewide information management system at <http://cers.calepa.ca.gov>.
Violation Division: Riverside County Department of Env Health
Violation Program: HMRRP
Violation Source: CERS

Site ID: 384164
Site Name: ACKER STONE INDUSTRIES
Violation Date: 11/2/2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 02/06/2019. OBSERVATION: The chemical inventory description page submitted for all the chemicals does not include the new federal hazard classes. Additionally, update the sealer units to gallons not pounds, as it is stored. Also, include the joint stabilizer sealer in your chemical inventory. CORRECTIVE ACTION: Owner/operator shall update the chemical inventory page for all chemicals and submit to the statewide information management system at <http://cers.calepa.ca.gov>. Missing information may be found by looking at the chemical safety data sheet. Owner/operator shall include a chemical inventory page for the stabilizer sealer.

Eval Notes: The discharge points along the back of the facility have recently been blocked to prevent Stormwater from flowing to the drainage area behind the facility. The remaining discharge point at the site is in the middle of the facility where the site transitions from the industrial area to the area proposed to be paved with pavers. The site is noted as a Level 2 ERA site for TSS. Loose dirt may be found at this discharge location that is noted in the SWPPP as a sampling point. This location is designated as a sampling point for the facility as it discharges to the Construction NOI portion of the site. This construction area is where product is stored. The down gradient side of the lot has berms placed to prevent discharge from the lot.

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
